

EcoMix

recycled plastic with visible materiality

Designed for urban environments

EcoMix has a subtle stone-like appearance, created naturally by the recycled plastic composition. The textured surface makes dirt, scratches and wear less visible, helping furniture maintain its visual and functional quality in demanding outdoor spaces.

EcoMix highlights

- Maintenance-free and easy to clean
- Lifespan up to 30 years
- Recyclable PE, reusable up to 7 times
- 33–93% post-consumer recycled plastic (varies by colour)
- Also available in an eco-labelled version

Material with circular potential

EcoMix is made from polyethylene (PE) and selected recycled plastics such as fishing nets and bottles.

It contains 33–93% recycled content, depending on colour. The remaining recyclable PE ensures durability and colour flexibility.

From experience to material innovation

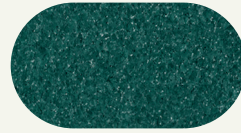

The anthracite colour was developed for our LOOP product family in recycled material and achieved the Nordic Swan Ecolabel.

The material innovation behind this colour formed the foundation for EcoMix. At out-sider, we believe sustainable materials should be visible, and EcoMix expresses recycled plastic through an honest, distinctive surface.
